

Primble Live Test

Engineering Handoff — September 1 Test

Prioritized V1 triage • systemic corrections • bugs • workflow / UX • UI / copy

How to use this document

Work from top to bottom unless a technical dependency requires a different sequence. Systemic corrections and functional bugs are the gate. Workflow / UX changes follow only after the core behavior is reliable; UI and copy changes come last. Screenshots show the observed state, while the expanded text defines the intended correction.

30 consolidated handoff items | 40 source screenshots | grouped by engineering type and priority

Triage Summary

The document is grouped by engineering type so the implementation sequence is unmistakable: systemic corrections first, then functional bugs, then workflow / UX improvements, and finally UI / copy polish. Within each group, the highest-impact items appear first. System behavior and data integrity take precedence over presentation improvements.

Basis for this handoff The September 1 live test remains the source of truth. Relevant verified implementation detail from the prior test has been merged directly into matching September 1 issues where it clarifies expected behavior or regression criteria. Prior-test findings that are not reflected in the September 1 test are excluded.			
ID	Priority / Type	Area	Issue
SYS-05	P0 · Systemic correction	Coverage normalization	Normalize Auto coverage terminology back to the Automobile line of business
SYS-06	P0 · Systemic correction	Carrier / policy mapping	Keep carrier and policy number line-specific instead of forcing one submission-wide value
SYS-07	P0 · Systemic correction	Normalization / boolean fields	Normalize Yes, True, and X/checkmark as the same affirmative value
SYS-04	P0 · Systemic correction	Coverage detection / recommendations	Do not create Workers' Compensation loss issues when Workers' Comp is not part of the submission
SYS-09	P0 · Systemic correction	ACORD contact mapping	Separate client contact and brokerage contact when populating ACORD forms
SYS-02	P0 · Systemic correction	SQS scoring / Loss History	Loss History remains at 40 even when "Check if none" is correctly populated
SYS-01	P0 · Systemic correction	Client questionnaire / Critical tagging	Tag the identified unresolved client questions as Critical
BUG-07	P0 · Bug / questionnaire generation	Client questionnaire / vehicle schedule	Stop generating hundreds of ghost vehicle questions
BUG-04	P0 · Bug / form-state correction	ACORD 125 / Loss History	Do not force a required loss-row Date of Occurrence when "Check if none" is selected
BUG-06	P0 · Bug	Apply corrected value modal	Investigate the apply-value error in the renewal/date correction modal
BUG-05	P0 · Bug / remediation actions	Review / recommendation actions	Fix remediation actions that return Network or unsupported-action errors
BUG-01	P1 · Bug	Client questionnaire	Questionnaire progress is showing completion before the client has answered anything

BUG-03	P1 · Bug	Producer form workspace	"Sent to Client (2)" count appears when it should not
BUG-02	P3 · Bug / UI state	Client questionnaire help	Investigate the unexplained green "1" badge on the help control
UX-05	P1 · Workflow update	Cross-form validation / form management	Allow the producer to add a missing form directly from a validation finding
UX-04	P2 · UX / safeguard & guidance	Document processing	Explain Exclude, Supporting only, and Review data actions before use
UX-03	P2 · UX / workflow clarification	Warnings review	Clarify Resolved versus Dismissed
UX-06	P2 · UX / default state	Document processing	Load the Documents Processed / All clear section expanded by default
PROD-02	P2 · Product decision	Warnings / underwriting language	Reassess whether the Specific Wording Requirements warning belongs in Important
UI-06	P3 · UI / noise reduction	Submission Integrity / normalization	Remove duplicate/noisy coverage-term equivalence output
UI-12	P3 · UI / copy cleanup	Data merge / extracted data	Remove the internal "MERGE REJECTED" language from the user-facing UI
UI-08	P3 · UI / wording correction	Umbrella / cross-form status	Use "available for" rather than "applied to" when showing Umbrella-related forms
UI-01	P3 · UI / copy update	Client questionnaire	Use "insurance broker" rather than "insurance agent" in client-facing language
UI-02	P3 · UI / copy update	Client questionnaire help	Rewrite the automated forms assistant greeting
UI-03	P3 · UI / copy update	SQS warnings	Spell out Submission Quality Score in the score-cap warning
UI-04	P3 · UI / explanation update	Data Consistency	Add a tooltip explaining what "equivalent" means
UI-07	P3 · UI / copy update	Data Consistency actions	Shorten "Confirm & apply to forms" to "Confirm"
UI-09	P3 · UI / copy update	Integrations	Clarify enterprise-only integration access
UI-10	P3 · UI / notification behavior	Toast notifications	Auto-dismiss all toast notifications
UI-13	P3 · UI cleanup	Submission review navigation	Remove the redundant control that only jumps the user back up the page
Core regression gate On retest, verify that carrier and policy values remain line-specific; inactive coverage lines do not generate requirements; a confirmed no-loss state updates both form requirements and Loss History scoring; business-defined unresolved client questions are tagged Critical; ghost vehicle questions are not generated; and remediation actions complete without			

contradictory or
generic errors.
