1. Footer came up blank in lieu of header at first. Reloaded okay. Just a small rendering or spacing issue.

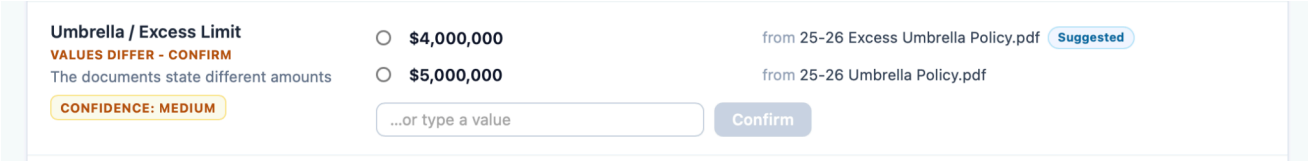

2. Make buttons reactive to section state. So “Continue to Documents” etc. OR simply “Next” in which it will move the user through to the subsequent section. Making the form selection button the final in the sequence.

3. Nice job. These were all actually dec pages but titled as “policy xyz”.

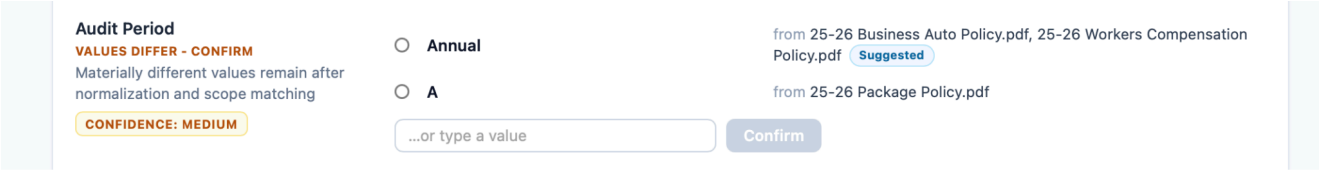

4. Rule: When we have an umbrella base with excess on top of it, each gets their own form 131. So in this case, both premium amounts are actually correct. Layer 1 is Umbrella, with an underlying schedule focus to GL, Auto, and WC. Layer 2 is Excess, which gets mapped to the underlying umbrella policy. Basically in this case, they were maxed out at $5M, so the client had to seek an additional carrier with different additional coverage (i.e. the excess).

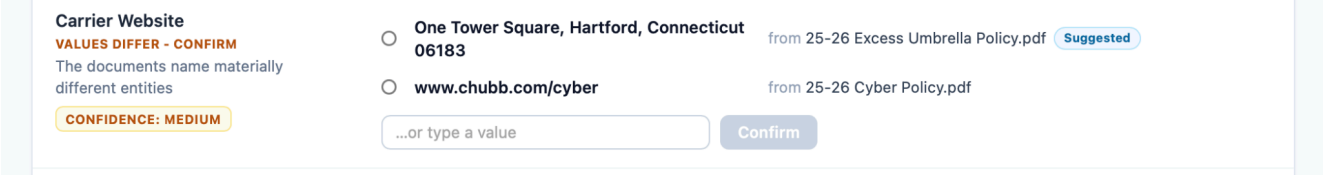

5. Rule: Take a look at form 130. Audit periods are either at expiration, semi-annual, quarterly, monthly, or other. So, in this case, neither option would be correct.

   We also need to be careful with “A” because that can mean “Annual” or “Auditable” depending on the context.

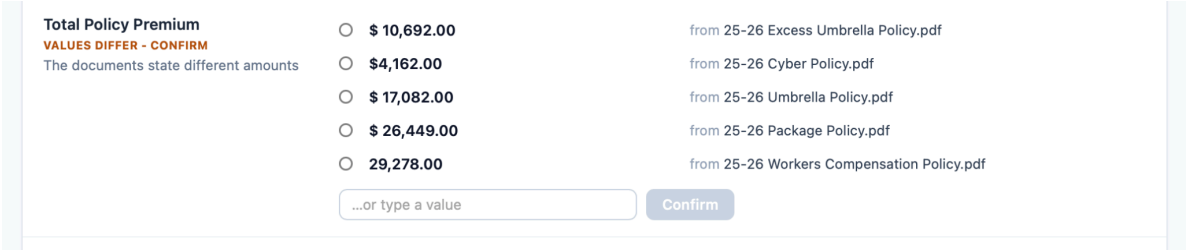

6. This top option is a physical address and obviously isn’t a website. However, the cyber policy did have a website, so that was a good option. Website wouldn’t go on the 125, but it would go on 126 and others. It’s line dependent, so a person could have multiple.

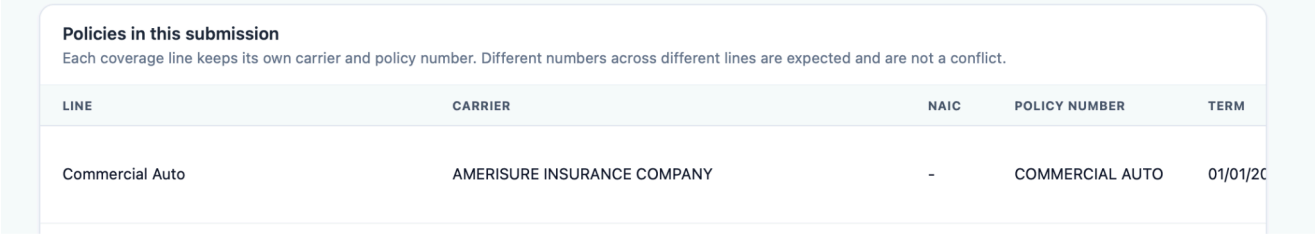

7. Please normalize currency formatting in screenshot below for premium values. “$ X”.

   More importantly, all of these need to go on form 125 as premiums with carrier information. We also need to be able to select them all because each value will go onto the corresponding accord form.

   So:
   - 25-25 Package Policy
     - Commercial GL*($16,818) is form 126.
     - Property ($6,275) is form 140.
     - Inland Marine ($2,431) is form 152
   - WC ($29,278) needs to go on form 130.
   - Excess and Umbrella ($10,692 + $17,082) needs to go on separate form 131.
   - Cyber ($4,162) goes on form 834
   - Auto goes on form 127 (premium was redacted on declaration page)
   - EPLI Employment Practices Liability goes on form 827 (no premium amount listed on dec page)

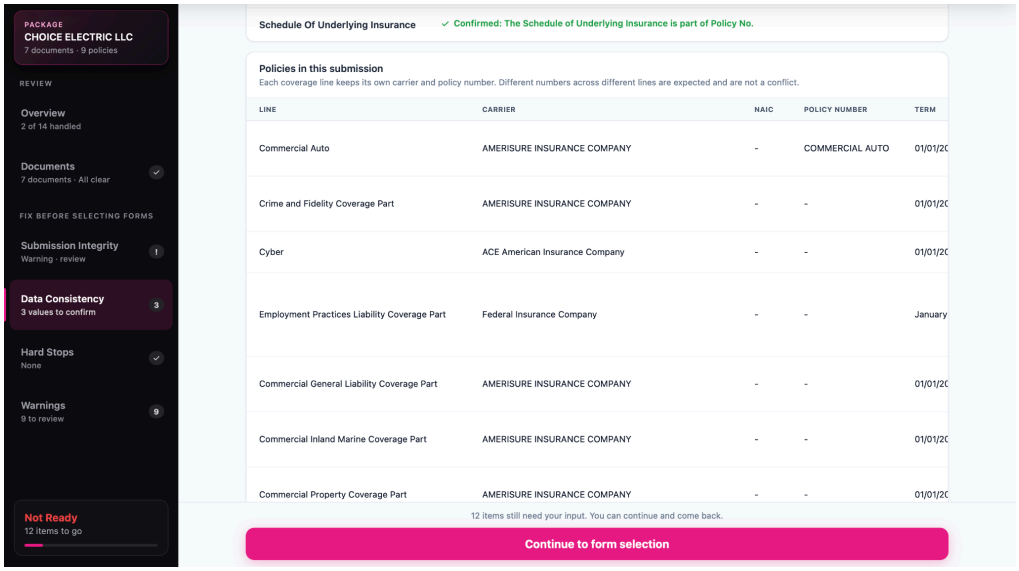

8. This one is confusing because “Commercial Auto” is labeled in the page. But obviously it’s not an actual policy number. So the extraction was correct, but the validation needs a little refinement. Policy number will always have an actual number somewhere in the string, even if it starts with letters.

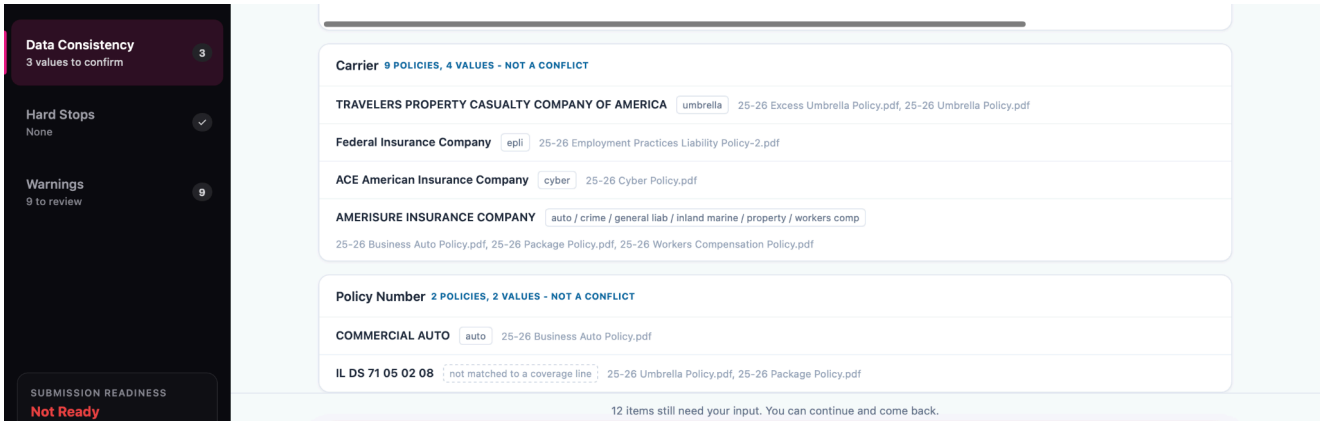

9. We uploaded 7 distinct files. Within them though, there should be 10 found policies. The system only identified 9 and is missing the “Excess” one.

   Secondly, can we add a way to inline edit missing or incorrect fields and/or add a missing policy line altogether?

   Thirdly, is there a way to wrap text so everything doesn’t flow off the screen and require horizontal scrolling?

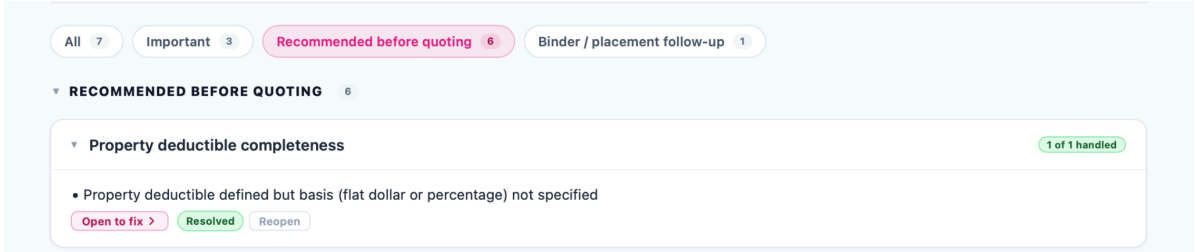

10. Let’e just hide/remove these two blocks because they are redundant to the table above. In lieu of them, please add a function to sort/group by carrier within the table.

11. Style preference. Please remove the “Important” block entirely because the information is already present in the other sections here. It is redundant and not actionable like the others.

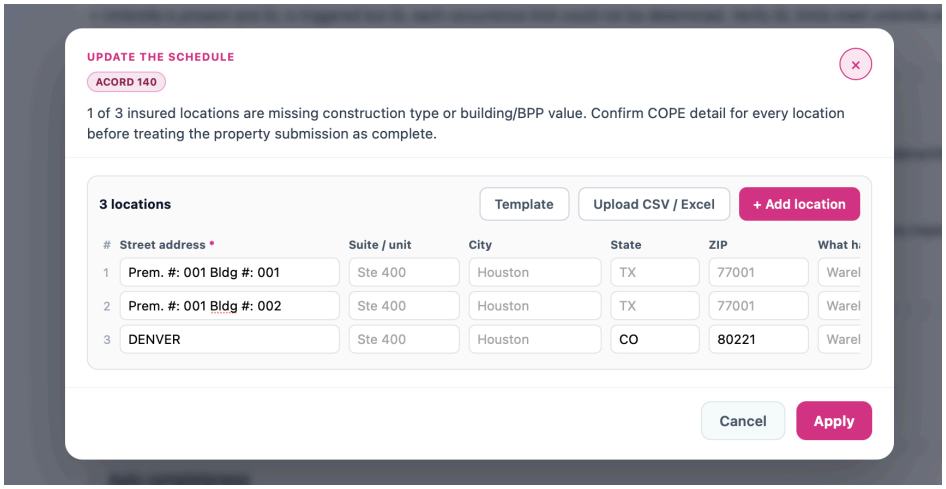

12. On the “Required before submission” block (and the Binder/placement block) the items disappear after “open to fix” actions. Please keep them in the list as “resolved” like with the items in the “recommended before quoting” block. That way a user can see what they’ve already addressed.

13. Open to fix makes sense because it’s actionable. However, Resolve and Dismiss, are basically just status tags. Let’s not provide a “Resolve” option and rely on the “Open to fix” action and the “Dismiss” tag. Something can become “Resolved” though with that tag visible after it’s been fixed.

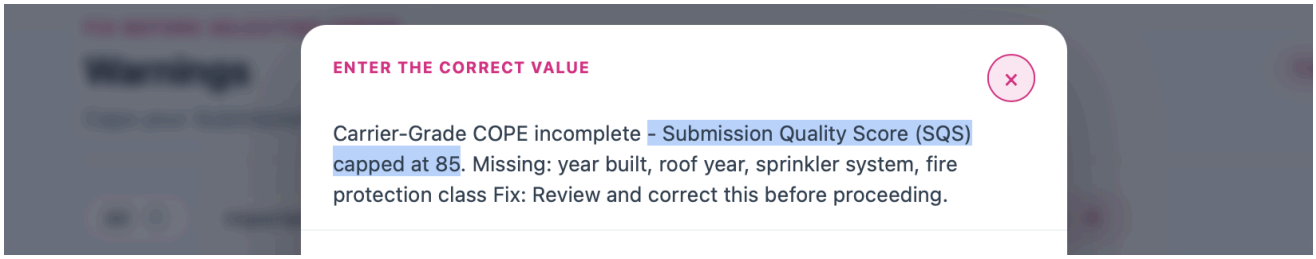

14. Few things here: 1) There are two separate buildings on this location; not three. But a good catch. 2) There's no place for users to enter values, and there should be as per the popup instructions - "are missing…BPP value." 3) Note that you'll need to update the template as well.

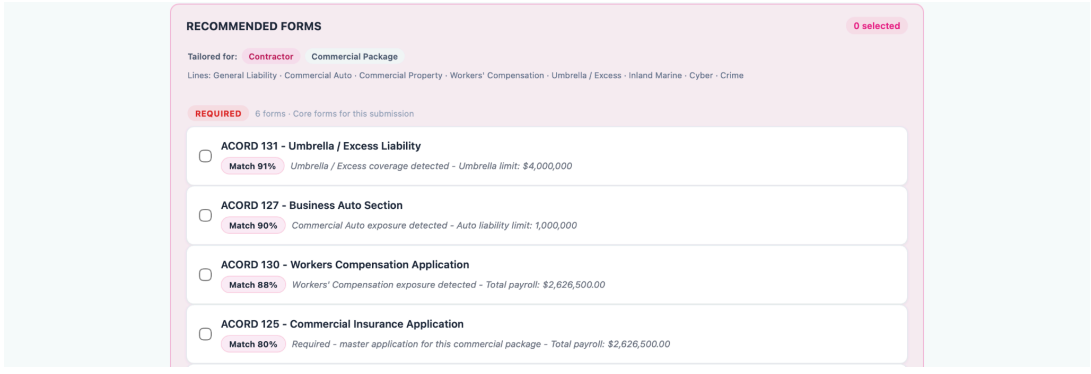

15. This tucks under WC.

16. Remove this highlighted part about the SQS. Or change to "- fulfill to increase your Submission Quality Score (SQS)™." Aim to encourage positive messaging of the good outcome rather than a negative.

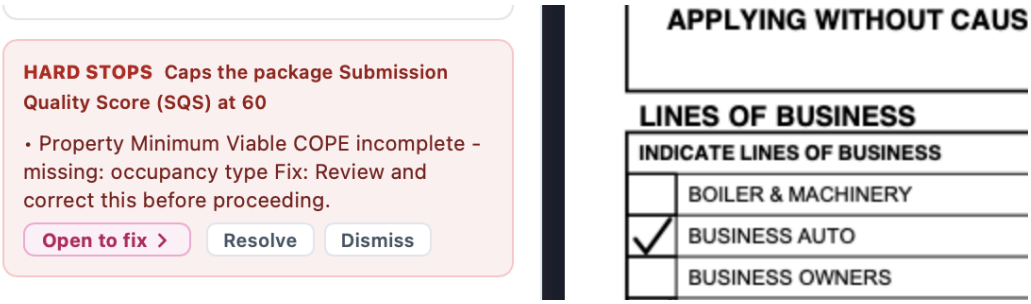

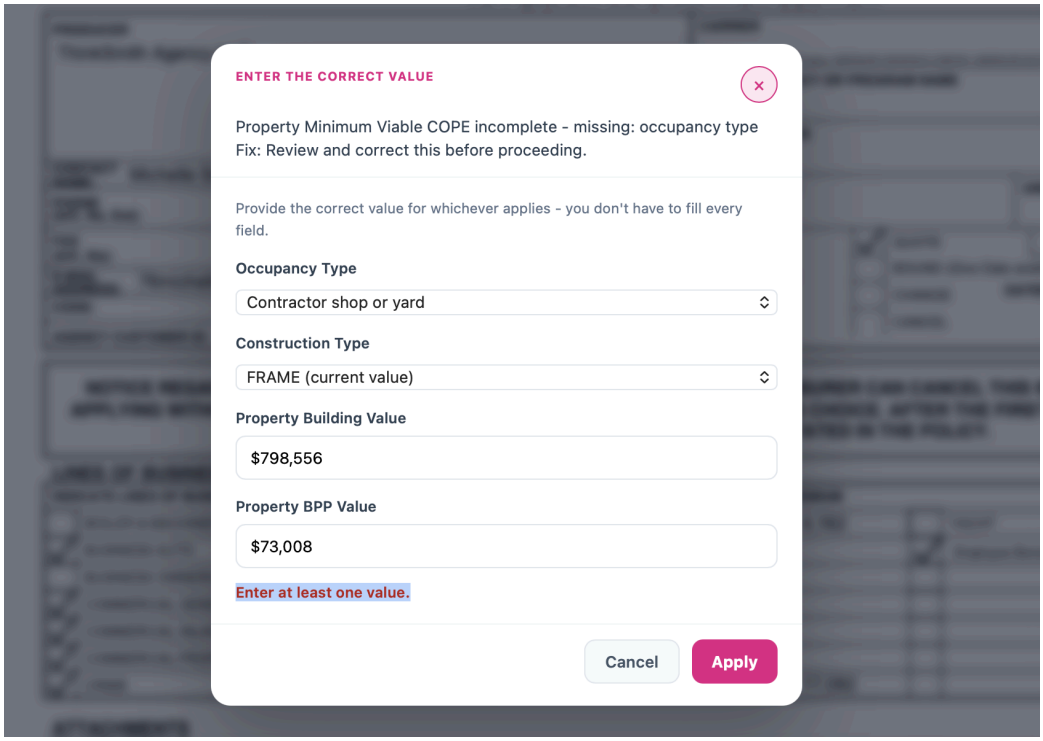

17. Make form 125 selected by default. And/or move it to the top of the list as the anchor form.

18. There were no Hard Stops in the initial SQS prior to form selection, but there's Hard Stops now. Why? This should all be addressable prior to forms. Also, I had already answered this previously. Responses were saved correctly under Warnings as evidenced in the second screenshot below. It's erroring "Enter at least one value" even though everything is/was already filled in properly. Had to retype.

    Also, this should have turned up TWO building property values per #14 above. Again, should hide under "Reviewed" after resolved - see prior instructions.

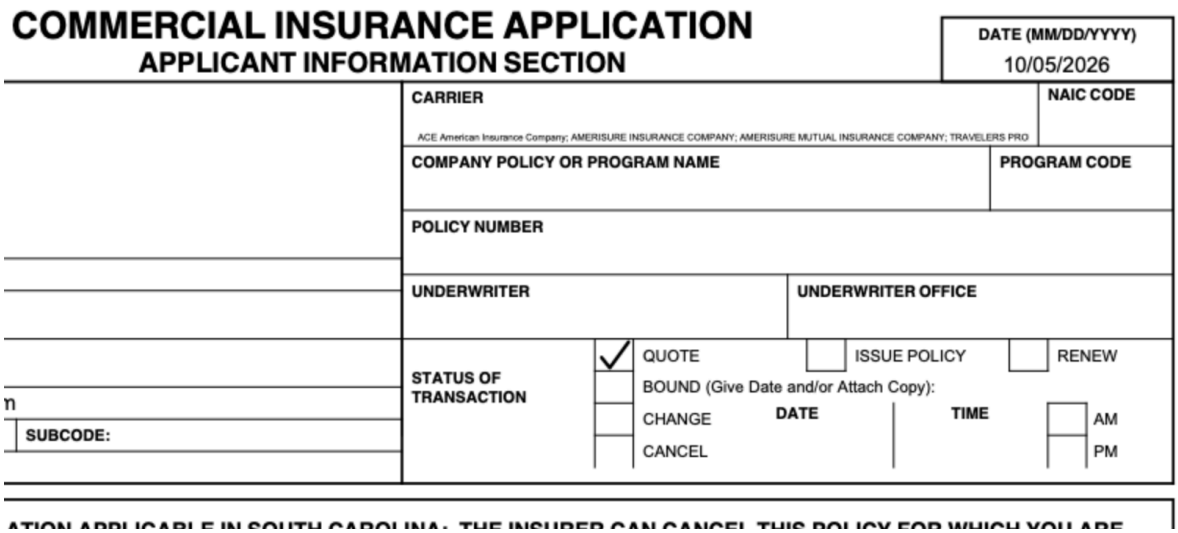

19. Where is the updated Edit button - perhaps similar to the "Done Editing" button? Form field double-click not working either.

    Need to add a "Cancel" option so we don't force a save or refresh. I understand that the "Done Editing" acts as a "Cancel" if there haven't been any inputs, but it's not intuitive that way. Done Editing should be reserved for actual updates.

20. Still missing carrier information.

BEST SOLUTIONS

Percentages below are for the whole package, not this form.

1 **Hard stops need attention**
Property Minimum Viable COPE incomplete - missing: occupancy type Fix: Review and correct this before proceeding.

2 **Loss History** 25%
No loss history provided - required for carrier submission

3 **Structural Completeness** 62%
FEIN / Tax ID

4 **Exposure Consistency** 70%
Incomplete: Operations, Cross-Document Consistency, Auto Completeness

5 **Narrative Quality** 40%
Narrative includes Risk Controls, Coverage Discussion, Prior Carrier / Marketing Reason, but does not include Account Overview, Operations Description, Years in Business, Management Experience (+5 more)

6 **Property Integrity** 90%
Improve property integrity

23. Responses did not save from previous step (#14).

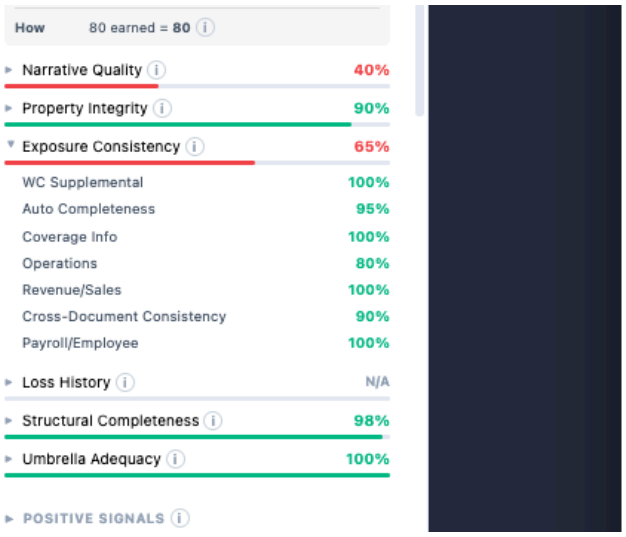

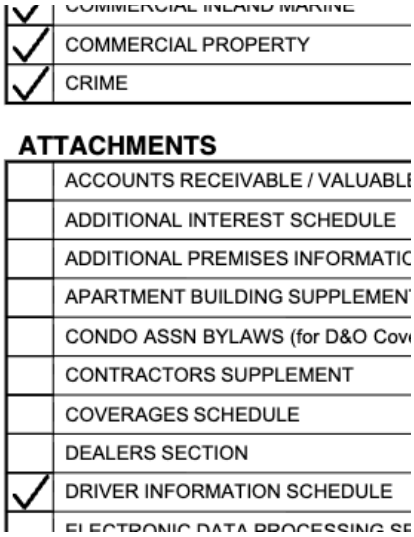

24. Please remove the pill style from the form tag in this list and just leave the pink lettering. Or feel free to come up with something else. The problem is too many pills and colors. Gets confusing when all stacked together; especially with “Open to fix”.

25. Unable to upload a narrative or additional supporting docs after form generation. Deploy the submission profile as previously requested.

26. Recheck scoring logic on Exposure Consistency - in this case for the whole package. . Scoring seems to be incorrect.

27. This is still showing up when we attempt to download all forms. We have already asked for these items to be addressed at the start of the packaging and not keep it at the end. Nobody is going to take the time this late in the stage to go back to locate and fix things that were not part of the SQS warnings or forms recommendations.

    For what it's worth, 176 items flagged is a lot. I'm concerned with the logic behind that. Also, these are hard stops. This should all be brought up sooner.Please get these earlier in the workflow and ensure they are accurate requests to complete.
